Capitol Connection

Week of October 16, 2023

By Shauna Krause, President, Capitol Services, Inc.

Like sausage, they are making new law every day too! Contractors who fail to keep up could find themselves behind the curve. If you missed the change in NV this October that could be you. Life changes things daily. Change is just about the only constant you can count on and why having an expert resource keeping up lets your focus remain on the job...

Q: We have a Joint Venture license that was formed to bid on some work. The contract was awarded to the Joint Venture and the work was complete, but there may be some minor repair/warranty work remaining. One of the JV entities has agreed to sell their interest in the JV to the other entity. At the time of the sale, that entity will withdraw/disassociate from the Joint Venture. What impact will that have on the license? Will it immediately be terminated? If so, can the JV obtain an extension from the CSLB to complete the contract closeout and any repair/warranty work?

A: When one of the JV entities disassociates, the JV license will be cancelled. The remaining entity can request a continuance of the license to complete projects contracted for or in progress prior to the date of the disassociation. The continuance can be requested for a "reasonable amount of time" to be determined by the Board. The request must be made in writing and received within 90 days of the disassociation of entity being removed.

I would suggest providing a copy of your warranty to the CSLB to show the time it covers. If it's a year, they may give you year (?) Otherwise, obviously transfer the contracts to the entity who will be performing the work for when the continuance expires.

Renewal Reminders: To ensure a timely renewal of your license, be sure to keep your license information updated! Items you will want to keep in order are bonds, insurance, current Officers of record, current Qualifying Individual, and Secretary of State entity status.

A new law became effective October 1, 2023 in NV which affects all residential contractors. The statute requires all contractors performing residential improvement work comply with one of the following: 1. A down payment or deposit amount cannot exceed \$1000 or 10% of the aggregate contract price, whichever is less, of any initial down payment or deposit paid or promised to be paid to the residential contractor by the owner before the start of work, OR, 2. The provisions of item 1 do not apply if the residential contractor has filed a Bond solely for the protection of consumers in the amount of \$100,000, or has been granted relief by the Board pursuant to subsection 5 of NRS 624.270.

Regardless of which option you choose, this new law requires that you update existing contracts to ensure compliance. The new language which must be included in all contracts for residential improvement on single-family residences must include can be found here http://nscb.nv.gov/residential_improvements.html.

While knowledge is power, knowing where to go for the answers is half the battle. Get expert assistance immediately when you call 866-443-0657, email info@cutredtape.com, or write us at Capitol Services, Inc., 3609 Bradshaw Rd, Ste H, #343, Sacramento, CA 95827. Search past columns at www.cutredtape.com.

(RFP) for General Contracting Services

Addenda: 0

10/20/23 5:00 PM 23-03266 Eureka

Prebid Conf: 10/11 @ 2

Open Door Community Health Services (ODCHC) is inviting firms to provide proposals to perform Design- Build services for tenant improvements at property address 1017 Myrtle Avenue in Eureka, Ca. The improvements will expand the existing sixteen (16) chair dental practice by adding six (6) dental exam and associated areas within a portion of the building that was previously used by ODCHC as an office. Please see the attached existing/demolition and proposed floorplans. Specifically, the scope of work will include the following: Improvements in Expansion Area:

- Demolish existing office area; • Install new sewer line to City lateral to separate service in expansion area from other building tenant;
- Construct (6) new dental exam rooms and utility room with all associated infrastructure, on the existing slab foundation; • Construct new dental sterilization center and laboratory; • Construct three (3) new restrooms plus a janitorial closet with mop sink; • Construct administrative office area.

Remodel Improvements in Existing Dental Center: • Demolish patient restroom in waiting room; • Reconfigure existing reception desk with additional transaction window; • Create new panorex x-ray area, in location of existing dental lab; • Upgrade existing 50kw generator that currently services the dental center with a 100kw unit to serve the expanded clinic; • Current dental practice operations must be maintained during all phases of work.

All questions regarding this RFP must be submitted in writing in email format and directed to Dwayne Lemos at dlemos@opendoorhealth.com by October 13, 2023.

Bidders:

Pacific Builders	General Contractor	Office: 707-822-7720	Fax: 707-822-7369
Guzi West Inspection & Consulting	Testing & Inspection Services	Office: 707-496-2790	

Ferndale Veterans Hall ADA Modification Project

Addenda: 0

10/31/23 2:00 PM 23-03354 2022-802 Ferndale

Prebid Conf: 10/18 @ 2 1100 Main Street, Ferndale

This project includes the demolition of the existing parking stall and construction of a new accessible parking stall complete with a new access ramp to the front entrance of the facility as well as constructing a new accessible path of travel linking the new ramp to the public right of way.

Bidders may submit written inquiries for clarifications or questions attention of Travis I Smith by email at: ada@co.humboldt.ca.us or by mail at 825 5th Street, Room 112, Eureka, CA 95501.

Biosolids Disposal Project

Addenda: 1

11/2/23 3:00 PM 23-03362 2024-2 Eureka \$314,000 to \$1,000,000

Prebid Conf: 10-10 @ 10:30 4301 Hilfiker Lane, Eureka

This service contract consists of hauling and disposal of dewatered sludge from the Elk River Waste Water Treatment Plant for two years. The plant is continually dewatering the sludge with a centrifuge that drops the material onto a conveyor belt, which then drops it on the ground of our storage facility. The City will assist with loading the sludge by using our loader and personnel. During mid-April to the end of October will be referred to as the "dry season" and November through the beginning of April will be refer to as the "wet season." The intent of breaking up the year into seasons is to allow for production of biosolids to be increased in the dry season when the material can be land applied at a reduced cost to the City.

Questions regarding the availability of soil test data, water table elevations, and the like should be submitted to the City in writing.

Bidders:

Bettendorf Trucking	Sub-Contractor/Specialty Contractor	Office: 707-599-4568

RFQ The Trinidad Rancheria - Foundation for Steel Finished Water Tank

Addenda: 0

11/3/23 5:00 PM 23-03148 Trinidad

Prebid Conf: MAND A single page letter of interest on Consultant letterhead shall be transmitted via email to Leslie Sanders, at lsanders@trinidadrancheria.com , and CC Julia Shiplacoff, P.E., at julias@stetsonengineers.com , no later than 5:00 pm (PDT), September 29, 2023.

Task 1. Mobilization and Site Preparation A. Mobilize materials and equipment to site. B. Clearance and removal of any debris from site. C. Backfilling (if necessary), levelling, and compaction of the soil foundation. D. Soil compaction testing is to be done by a professional geotechnical engineer under separate contract before Task 2. Construction of Foundation may commence and is NOT part of this scope. Task 2. Construction of Foundation A. Excavate and shape material for foundation. B. Furnish and install formwork, reinforcement, and concrete according to Plans and Specifications in Appendix A. C. Install provided anchor bolts according to Appendix A. D. Strip forms and backfill the perimeter of foundation with specified grade]. E. Install sand bedding according to Appendix A. Task 3. Over-excavation and Re-compaction (if necessary, given site conditions) A. Over-excavation and hauling of native materials (vegetation, roots, loose rock, etc...) if encountered, and re-compaction to 6' below grade and 3' outside the foundation limits, prior to Task 2 Construction of Foundation, as determined by the geotechnical engineer. Task 4. Dewatering (if necessary) A. Remove water from the site to the satisfaction of the geotechnical engineer, prior to Task 2 Construction of Foundation. Task 5. Demobilization and Clean-up B. Clean site upon completion of all construction work. Remove all temporary work and debris from site. Ensure no dumping on Trinidad Rancheria.

Questions shall be submitted before 5:00 PM (PDT) on October 13, 2023.

License required (C-8, C-12, and C-50)

RFP On Call Low-Voltage Cabling Solutions

Addenda: 0

10/23/23	2:00 PM	23-03283		Ukiah	\$60,000 to \$60,000
-----------------	----------------	----------	--	-------	----------------------

The selected vendor will be responsible for providing on-call, as needed low-voltage cabling solutions. This would include, but not be limited to, data, voice and video cabling. The following are descriptions of the types of tasks that may be requested: Cat6a Cabling: Designing and implementing Cat6a Ethernet cabling for network connectivity in city offices, public facilities, and critical infrastructure areas. Ensuring compliance with industry standards and local building codes during installation. Performing thorough testing and certification of Cat6a connections to guarantee optimal performance. b) Fiber Optic Cabling: Designing and deploying fiber optic cabling solutions to enable high-speed data transmission for city facilities. Maintenance and Repair: Troubleshooting and repair of existing low-voltage cabling. Preventative maintenance as requested. Miscellaneous Services: Includes, but not limited to, pulling permits, attending project meetings, and interfacing with other vendors as needed. Documentation: Providing as-built diagrams. Documentation of work completed, including test results and any materials use. Materials: Contractor is responsible for sourcing and supplying all high-quality new cabling and related materials unless otherwise noted. Quality assurance: All work must meet or exceed industry standards such as ANSI/TIA/EIA, as well as local building codes. Conduct thorough and precise testing and certification of Cat6a connections to guarantee optimal performance, reliability and efficiency will be required. Safety: Comply with all OSHA standards and guidelines for workplace safety.

Questions to be submitted by Proposers: October 9, 2023

NEW Hopland Research and Extension Center - Roofing Project

Addenda: 0

10/24/23	5:00 PM	23-03449	1CA05719	Hopland
-----------------	----------------	----------	----------	---------

Prebid Conf: MAND 10/17 @ 10:30, 4070 University Rd. Hopland

Work to include but not be limited to: Remove all/tear off all existing layers of asphalt roof. Install 5" aluminum gutters and downspouts, with gutter guards. Supply and install new flashing and roof jacks on all penetrations and cover with underlayment. New 2X6 primed fascia at full perimeter- approximately 300'. Clad fascia in 24 gage Kynar White metal (or equal) to prevent woodpecker damage. Assess existing attic ventilation and add additional fire-resistant venting if necessary. The Contractor will follow all manufacturers' specifications for proper installation. Supply and install an XFR high-performance underlayment (or equal). Install 24 gage KYNAR WHITE (or equal) to be formed on-site to control waste and quality. Install standing seam 16" panels, full length, no exposed fasteners. Supply and install a Z closure 12 inches down from the ridge line on both sides of the ridge. Supply and install a 24inch ridge cap and rivet to Z closure. The Contractor will provide a written 30-year comprehensive materials and 5-year labor guarantee/warranty that begins on the project completion date. Replace damaged or rotten wood sheathing, fascia and eaves as needed. Potential unknown repairs are to be submitted as a change order.

TAILGATE SAFETY TOPIC

Entering and Exiting Vehicles Safely

Truckers, delivery drivers, farmers, firefighters, and workers that drive or ride in large commercial trucks and vans, farm equipment, and fire apparatus get injured when they enter and exit vehicles unsafely. Due to inattention, speed, and rushing in an emergency, workers slip and fall when they do not use vehicle steps and handhold devices. Jumps and falls cause ergonomic strains and sprains, broken bones, and fatalities. If you work around large vehicles, wear shoes with sturdy, no-slip soles and a heel. Clean and maintain the vehicle steps; wet or oily “diamond plate” can be very slippery. Only climb on dedicated stepping areas; fuel tanks and fenders can be slippery. In hot and cold weather, wear gloves to help you grip hand railings. When you **enter** a vehicle, face it. Take hold of the grab bar and use it to help you climb up. If a grab bar is not available, grip the seat or other fixed object in the vehicle. Don’t grab the steering wheel unless it is locked; it can turn suddenly and throw you off balance. Don’t grab the door or handle because it can swing out and cause you to fall. If grab bars are missing or improperly placed, add one or move it to a safer location.

Plan your steps into the vehicle so that you are standing on the same leg as the side that you are entering. To enter the left/driver’s side, stand on your left leg and lift your right leg up. You may need to change hand and feet positions while entering and exiting. Keep three points of contact with the vehicle at all times (one hand and two feet, or two hands and one foot). To avoid falling out backwards, maintain the three-point rule until you are securely seated or firmly on the ground.

To **exit** the vehicle, examine the ground before you step out. Look for ice, water, cracks, and uneven surfaces. Face the vehicle and step down backward while holding onto the grab bar or other stable surface. Use all of the steps until you reach the ground. Don’t use some of the stairs, then jump and hurt yourself by skipping one. Never jump down or “fall” down forward out of a vehicle; you can catch your clothing on the door handle, seat adjustments, seat belt, etc. causing a serious, uncontrolled fall.

Jumping increases the force and strain on your bones and joints (mostly ankle, knee, and back). For example, in a cab-over-engine tractor, jumping from the top step can apply 7.1 times your body weight to your back and leg joints (1420 pounds of force for a 200-pound person). Jumping from a delivery step-van with a package in hand causes an impact of 3.5 times the body weight plus package weight. Add these impacts to frequent entries and exits and you are at risk for an ergonomic injury. Climbing down safely can save you pain and time in the long run.

PORTÓN TRANSERO TEMA SEGURIDAD

Cómo entrar y salir de vehículos con seguridad

Los camioneros, conductores de vehículos de entregas, agricultores, bomberos y trabajadores que conducen o viajan en camiones comerciales grandes, equipos agrícolas o camiones de bomberos pueden resultar lesionados al entrar o salir de dichos vehículos de forma insegura. Debido a una falta de atención, alta velocidad o prisa en una emergencia, los trabajadores pueden resbalar y caerse cuando no usan los peldaños y pasamanos de los vehículos. Los saltos o caídas pueden causar esguinces o lesiones ergonómicas, fracturas de los huesos y la muerte.

Si usted trabaja cerca de vehículos grandes, use zapatos con suelas antideslizantes resistentes y tacones. Limpie y haga el mantenimiento de los peldaños del vehículo; las láminas con “dibujo de diamante” pueden ser muy resbalosas cuando están mojadas o cubiertas de aceite. Suba al vehículo sólo en las áreas diseñadas para llevar personas; los tanques de combustible y los guardabarros (salpicaderas) pueden estar muy resbalosos. En tiempo frío o caliente, use guantes para ayudarle a sujetarse de los pasamanos.

Cuando entre a un vehículo, debe estar de cara al mismo. Sujetarse del pasamanos y úselo para ayudar a subir. Si no hay pasamanos disponible, sujétense del asiento u otro objeto fijo del vehículo. No se sujete del volante a no ser que esté bloqueado, ya que puede girar de repente y hacerle perder el equilibrio. No se sujete de la puerta ni de su manija, ya que la puerta puede abrirse y hacerle caer. Si no hay pasamanos, o si está mal ubicado, instale uno o cámbielo a un lugar más seguro.

Planifique sus pasos hacia el vehículo de manera que esté siempre sosteniéndose sobre la pierna del mismo lado en que entra al vehículo. Para entrar del lado izquierdo o del conductor, párese sobre la pierna izquierda y levante la derecha. Quizá sea necesario cambiar la posición de la mano o del pie al entrar o salir. Siempre se deben mantener tres puntos de contacto con el vehículo en todo momento (una mano y dos pies, o dos manos y un pie). Para evitar caerse hacia atrás, observe la regla de los tres puntos hasta estar completamente sentado o completamente en el suelo.

Para salir del vehículo, examine el suelo antes de bajarse. Vea si hay hielo, agua, grietas o superficies desiguales. De cara al vehículo, bájese hacia atrás mientras se sujeta del pasamanos u otra superficie estable. Use todos los peldaños hasta llegar al suelo. No se deben usar sólo algunos peldaños y después saltar, lo que puede causar lesiones. Nunca salte ni se deje caer del vehículo; se le puede enganchar la ropa en la manija de la puerta, en un ajuste del asiento, en el cinturón de seguridad, etc., haciéndole caer de forma descontrolada.

Al saltar, se multiplican la fuerza y la presión sobre los huesos y las articulaciones (principalmente, en los tobillos, rodillas y espalda). Por ejemplo, en un camión tractor con cabina sobre el motor, saltar del peldaño más alto puede aplicar 7.1 veces el peso de su cuerpo a la columna vertebral y las articulaciones de las piernas (1,420 libras de fuerza en un hombre de 200 libras). Saltar de un camión de entregas con un paquete en la mano causa un impacto de 3.5 veces el peso de la persona más el peso del paquete. Estos impactos, sumados a las entradas y salidas frecuentes del vehículo, pueden hacerle correr el riesgo de sufrir una lesión ergonómica. Bajarse del vehículo de forma segura le puede ahorrar dolor y tiempo a la larga.

ELECTRIC VEHICLE Infrastructure Training Program

Redwood Coast Energy Authority is offering scholarships for up to ten certified electricians to become certified to install EV charging stations.

If you are a certified electrician, you may be interested in getting **EVITP certified** to bid on:

- RCEA's upcoming North Coast Phase 2 EVSE EV charging station projects
- Public works projects across the state of California
- EV charging stations at homes and businesses

Only certified electricians can sign-up for the EVITP certification training and exam on-line, which takes approximately 20 hours to complete (plus the exam time). Once completed, up to 10 electricians can apply for a scholarship by:

- Filling out a form
- Presenting proof of certification from EVITP
- Providing an invoice for the course

Funding for the North Coast Phase 2 EVSE EV charging stations is provided by RCEA and a Headwaters Fund Mini Grant.

For more information on EVITP training: <https://evitp.org/training/>

At RCEA contact Marianne Bithell (707) 382-2014 | MBithell@redwoodenergy.org

Scholarships available until 12/29/2023

Everything You Need for Your Financial Education.

- Fee-free Youth Savings Accounts for kids age 17 and under, opened with a minimum of \$5 and gifts!
- Presenters for classroom lessons and activities from pre-K thru college.

Looking to see if you can afford monthly car payments? Want to build an emergency fund? Need ways to prevent identity theft? It's all here and much more with **Practical Money Skills!**

LEARN

Take control of your finances and learn how to manage your money wisely.
